Summary:

The Cambridge History of Africa is a comprehensive and authoritative survey of African history from the earliest times to the present day. Written by John Fage, the book is divided into eight volumes, each of which covers a different period of African history. The first volume covers the prehistory of Africa, from the earliest human settlements to the emergence of the first civilizations. It examines the development of African societies, their political and economic systems, and their cultural and religious beliefs. The second volume covers the period from the rise of the great African empires to the end of the 19th century. It looks at the impact of the slave trade, the expansion of European

colonialism, and the emergence of African nationalism. The third volume covers the period from the beginning of the 20th century to the end of the Second World War. It examines the impact of the two world wars on African societies, the emergence of independent African states, and the struggle for decolonization. The fourth volume covers the period from the end of the Second World War to the present day. It looks at the emergence of new African states, the struggle for economic development, and the rise of African nationalism. The fifth volume covers the history of African art, literature, and music. It examines the development of African art, literature, and music from the earliest times to the present day. The sixth volume covers the history of African religions, from traditional African beliefs to the emergence of Christianity and Islam. The seventh volume covers the history of African science and technology, from the

earliest times to the present day. The eighth volume covers the history of African diasporas, from the slave trade to the present day. The book is an invaluable resource for anyone interested in African history.

#1. Prehistoric Africa: Africa has a long and complex history, with evidence of human activity dating back millions of years. The earliest inhabitants of the continent were hunter-gatherers, and the development of agriculture and the domestication of animals marked the beginning of the Neolithic period.

Africa has a long and complex history, with evidence of human activity dating back millions of years. The earliest inhabitants of the continent were hunter-gatherers, and the development of agriculture and the

domestication of animals marked the beginning of the Neolithic period. This period saw the emergence of the first civilizations in Africa, such as the Nok culture in Nigeria and the Aksumite Empire in Ethiopia. These civilizations were followed by the rise of powerful kingdoms such as the Ghana Empire, the Mali Empire, and the Songhai Empire. These empires were responsible for the spread of Islam and the development of trade networks across the continent.

The period of European colonization of Africa began in the late 19th century, and it had a profound impact on the continent. European powers carved up the continent into colonies, and they imposed their own systems of government and economy. This period also saw the displacement of many African peoples, as well as the introduction of new diseases and technologies. After World War II, the

process of decolonization began, and many African countries gained their independence in the 1960s and 1970s.

Today, Africa is a diverse continent with a population of over 1 billion people. It is home to a wide variety of cultures, languages, and religions, and it is a major player in the global economy. Despite its long history, Africa is still a relatively young continent, and its future is yet to be determined.
